## Screen Scrape Report

This Botflow created by BankRPA utilizes the actions of screen scraping data points from the user interface of any application and sending the output to Excel format and delivered to the respective teams.

This logic can be used to obtain data from the applications (for instance Core Systems) when the specific field is not available in the reporting. For instance, depending on how credit lines are set up in the core systems, often available balance for disbursement data is not available in the database. In that instance, if the data is available in the user interface, the field can be screen scraped via a botflow.

### Requirements:

- NintexRPA

### Most Common Use Cases

- Credit Line data that is not available in the reports.
- Daily Interest Rate updates
- Loan Balances
- Custom Fields not reportable
