Positive Pay Payee Match Botflow

This botflow created by BankRPA utilizes the actions of importing a list of current accounts that are enrolled in the Positive Pay product, and a data file from the Check21 Processing system that has all checks and accounts that were created for the day. This logic takes and pulls any of the checks from accounts that are enrolled in the Positive Pay product and takes those check images and creates a data file to send to Third Party vendor.

Requirements:
- NintexRPA

Most Common Use Cases
- Positive Pay Payee Match
- Other use cases when comparing a list of items against another data set.
